SRCNet Project Introduction

These slides present a brief overview of the SRCNet project current status and upcoming goals.

If you have questions please reach out to

Rosie.Bolton@skao.int

please ask permission before re-using any content.

Information correct at 30 September 2024

What are the SKA Regional Centres???

Several stages of cool, amazing, cutting edge data processing within the observatory... but **NO USER ACCESS**

What are the SKA Regional Centres???

SKA Regional Centres

Science Gateway, giving access to **Science enabling tools and applications**

running on federated compute and storage

enabling users to discover data in the **global SKA archive**, develop workflows, perform analyses and collaborate

addresses the "orders of magnitude" data problem

What are the SKA Regional Centres???

Science Gateway, giving access to **Science enabling tools and applications**

running on federated compute and storage

enabling users to discover data in the **global SKA archive**, develop workflows, perform analyses and collaborate

addresses the "orders of magnitude" data problem

SRC Network Vision

We will develop and deploy a collaborative and federated network of SKA Regional Centres, globally distributed across SKA partner countries, to host the SKA Science Archive.

The SRC Network will...

make data storage, processing and collaboration spaces available, while supporting and training the community, to...

**maximise the scientific productivity and
impact of the SKA.**

Science Enabling Applications

Analysis Tools, Notebooks,
Workflows execution
Machine Learning, etc

Distributed Data Processing

Computing capabilities provided
by the SRCNet to allow data
processing

Visualization

Advanced visualizers for SKA
data and data from other
observatories

Interoperability

Heterogeneous SKA data from
different SRCs and other
observatories

Data Management

Dissemination of Data to SRCs
and Distributed Data Storage

Data Discovery

Discovery of SKA data from the
SRCNet, local or remote,
transparently to the user

Support to Science Community

Support community on SKA data
use, SRC services use, Training,
Project Impact Dissemination

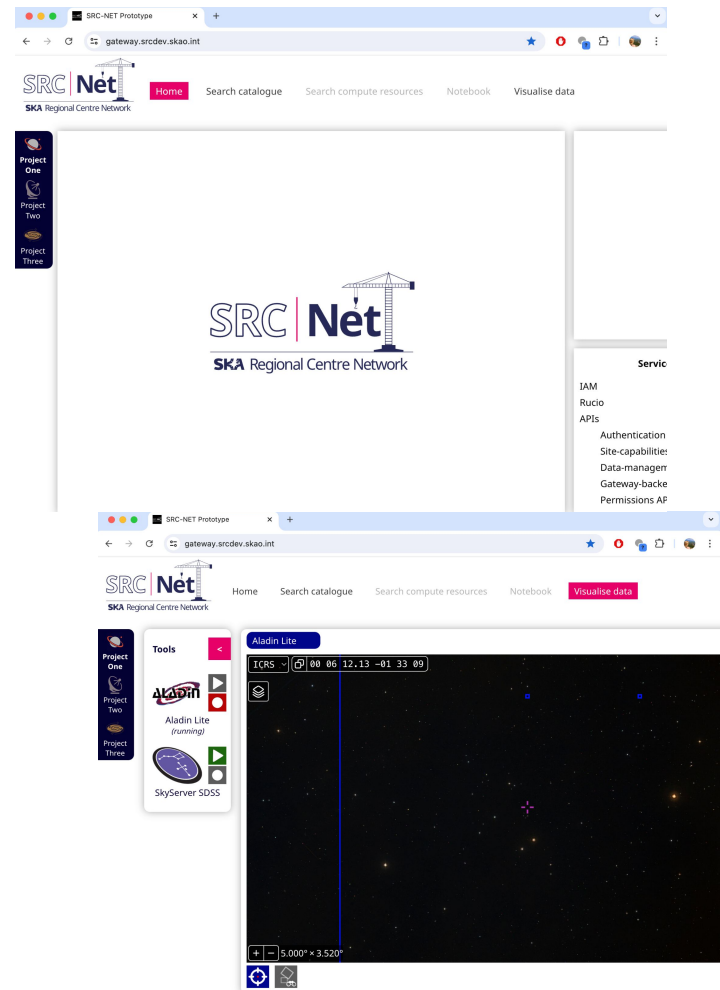

Intended user perspective

As a user, you'll be a member of one or more groups with an *SRCNet* allocation

- SKAO User (with successful SKAO proposal)
- Archival data user

You will log in via the Gateway

You will be able to select a current project, or discover data sets to add to a project

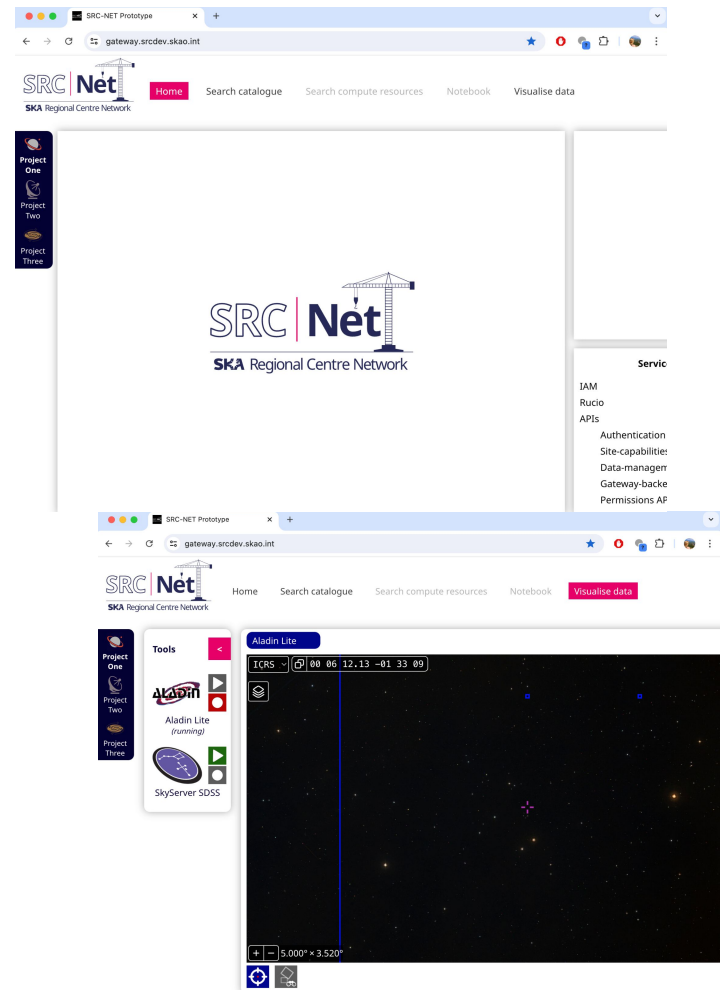

Intended user perspective

Within a particular project, with some allocated resources, you'll be able to identify services available to support your analysis of the data products you need

Then you'll be able to launch those services and run analyses

You'll be able to save intermediate results locally on the SRC your analysis is running on, and upload final data products ("ADPs") into the archive

Intended user perspective

You will be provided with some template workflows to speed up your analysis work

Break away from the **(doomed)** "download and analyse locally" paradigm

Great opportunity to foster reproducibility in workflows - I would love to see user workflows published alongside data in papers by default. Being forced to write software to run on SRCNet will make this final step easier

Behind the scenes - all should be hidden from user

Several sites (around 10-20) spread globally

Data replication must be efficient, and minimised

"Move the user (or code) to the data" where possible

The bulk SRCNet science archive will be centrally managed

SRC Operations Group able to trigger replications

At least 2 copies on different SRCs, but also consider storage class (eg. disk faster but more expensive than tape) - data lifecycle support

Auto-recovery if one site fails

Users shouldn't have to care which site is hosting them -

consistent experience across sites

SKAO Science timeline

2026-2027 SV campaigns produce up to 3.5 PBytes* of data each SV week

2027-2028 SV campaigns produce up to 14 PBytes* of data each SV week

*CURRENT ESTIMATES, subject to change

SRCNet timeline

Focus for activity for next 6 months

Real scientists start to use SRCNet

SRCNet0.1 planned sites

9 sites will contribute
compute and storage
resources to SRCNet0.1

8 PBytes total
storage
0.5 PFLOPS Compute

- Canada UVic 1-4 PB
- China Shanghai Observatory 1 PB
- Italy, INAF IRA, 0.3PB disk, 1.2PB tape, 10 gbps
- Japan, Tokyo NAOJ, 0.14PB
- Netherlands, SURF, 0.1PB
- Spain, IAA Granada, 0.5PB
- Sweden, Gothenburg, 0.3PB
- Switzerland, CSCS Lugano, 0.4PB
- UK, STFC RAL, 4.0PB

Storage fraction for SRCNet0.1

Compute fraction for SRCNet0.1

The SRCNet Project

The SRCNet Project aims to deliver a working SRC Network in time for formal start of SKAO Operations, and for intermediate science verification stages

- End date July 2028

This is distinct* from the long term "steady state" functioning of the fully-formed SKA Regional Centre Network

(*This distinction is important because governance structures are expected to be reassessed for long term functioning)

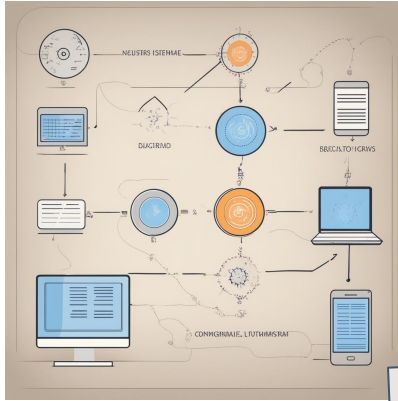

Development FTE average for past year

Currently about 40 person-worth of effort from 13 countries plus SKAO

SRCNet composition

Software & services

SW Development and Service operations

Hardware

Science Delivery

Science Users

Value Stream Development

The current SRCNet teams

Coral

Purple

Lavender

Gold

Orange

Red

Magenta

Teal

Tangerine

Chocolate

DAAC

Indigo

Since June 2022 we have been working as a team-of-teams

Engagement from across most SKA countries

Currently 40+ persons-worth of effort

70+ contributors

FTE in SRCNet SW development effort by date

SRCNet timeline*

Focus for activity for next 3 months

Real scientists start to use SRCNet

SRCNet Software development collaboration begins

● Informally offered software development effort comes together to explore and prototype technologies relevant for SRCNet

Software modules selected to take forward

Architectural design written

Principles and vision for SRCNet agreed

Sep
2024

SRCNet0.1 version released for testing

Test campaigns focus on scalability (including data management, ingestion service and workflows relevant for Science Verification stage)

Operations group is active

Feb
2026

SRCNet0.3 Version

Science Verification Use

June
2022

PI24

SRCNet 0.1 phase

SRCNet 0.2 phase

Jan
2025

Oct
2026

● First formally pledged resources

Project Lead established

Resource Board and Advisory Committee provide support and oversight

Deployment of services on pledged hardware to form 0.1 version of SRCNet0.1 to test the architecture

● SRCNet0.2 version

Enhanced components

Further work preparing for AA2 and Science Verification

SRCNet 0.1 is our first big milestone!!

At least 4 sites running full set of compulsory local services; global services also running to support this

First test of full SRCNet architecture

Due end of PI24; ie. 20th November 2024 (final work day of sprint 5)

SRCNet timeline

SRCNet timeline

SRCNet0.1

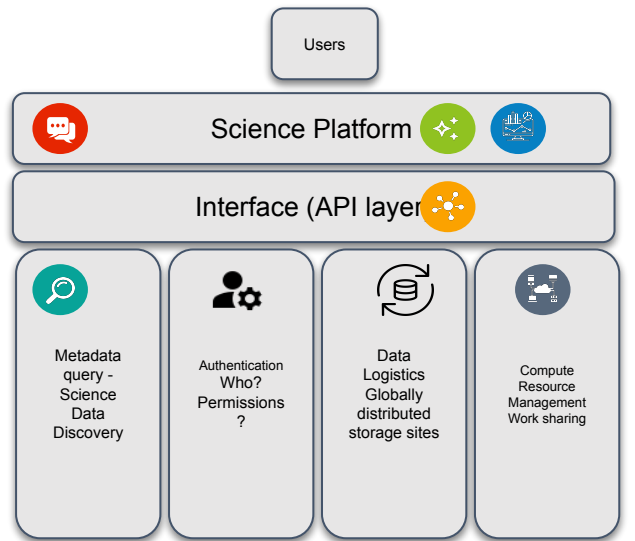

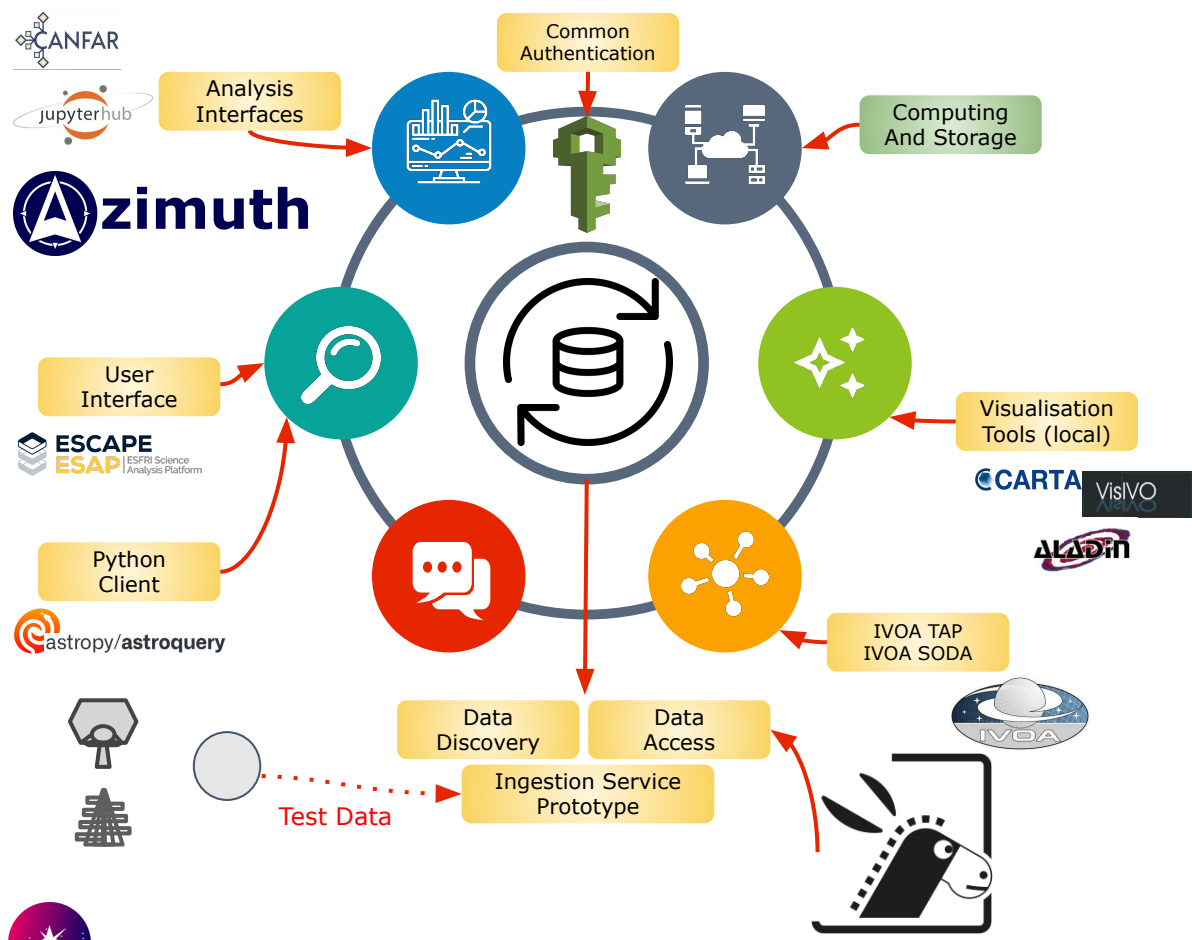

This is an "engineering" version

- **Built to show the architecture and test how it works**
- **Internal only** - no user-facing activities
- Exclusive storage to use in testing
- Compute to use during testing campaigns (may be backfilled when idle)
- Learn how to deploy and operate the services
- Set up of the SRC Operations Group, with limited scope

Focus for activity for next 6 months

Basic Functionality Covered by v0.1

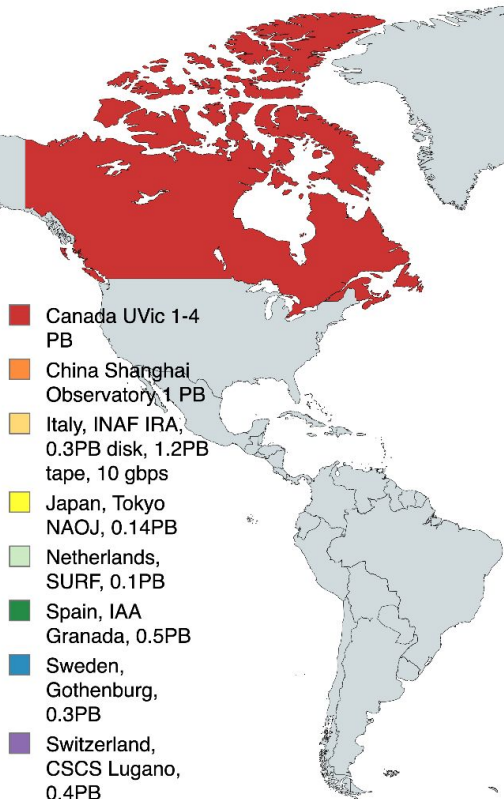

- Common Authentication: IAM
- Visualisation Tools (local)
- IVOA Protocols: TAP, SODA
- Data Discovery and Access from (Rucio)Data Lake
- Ingestion Service Prototype
- Python Client: Astroquery Module
- User Interface: Gateway
<https://gateway.srcdev.skao.int/>
- Analysis Interfaces: JupyterHub (compulsory); CANFAR Science Platform, Azimuth (UK)

SRCNet0.1 planned sites

9 sites aim to contribute compute and storage resources to SRCNet0.1

8 PBytes total storage
0.5 PFLOPS Compute

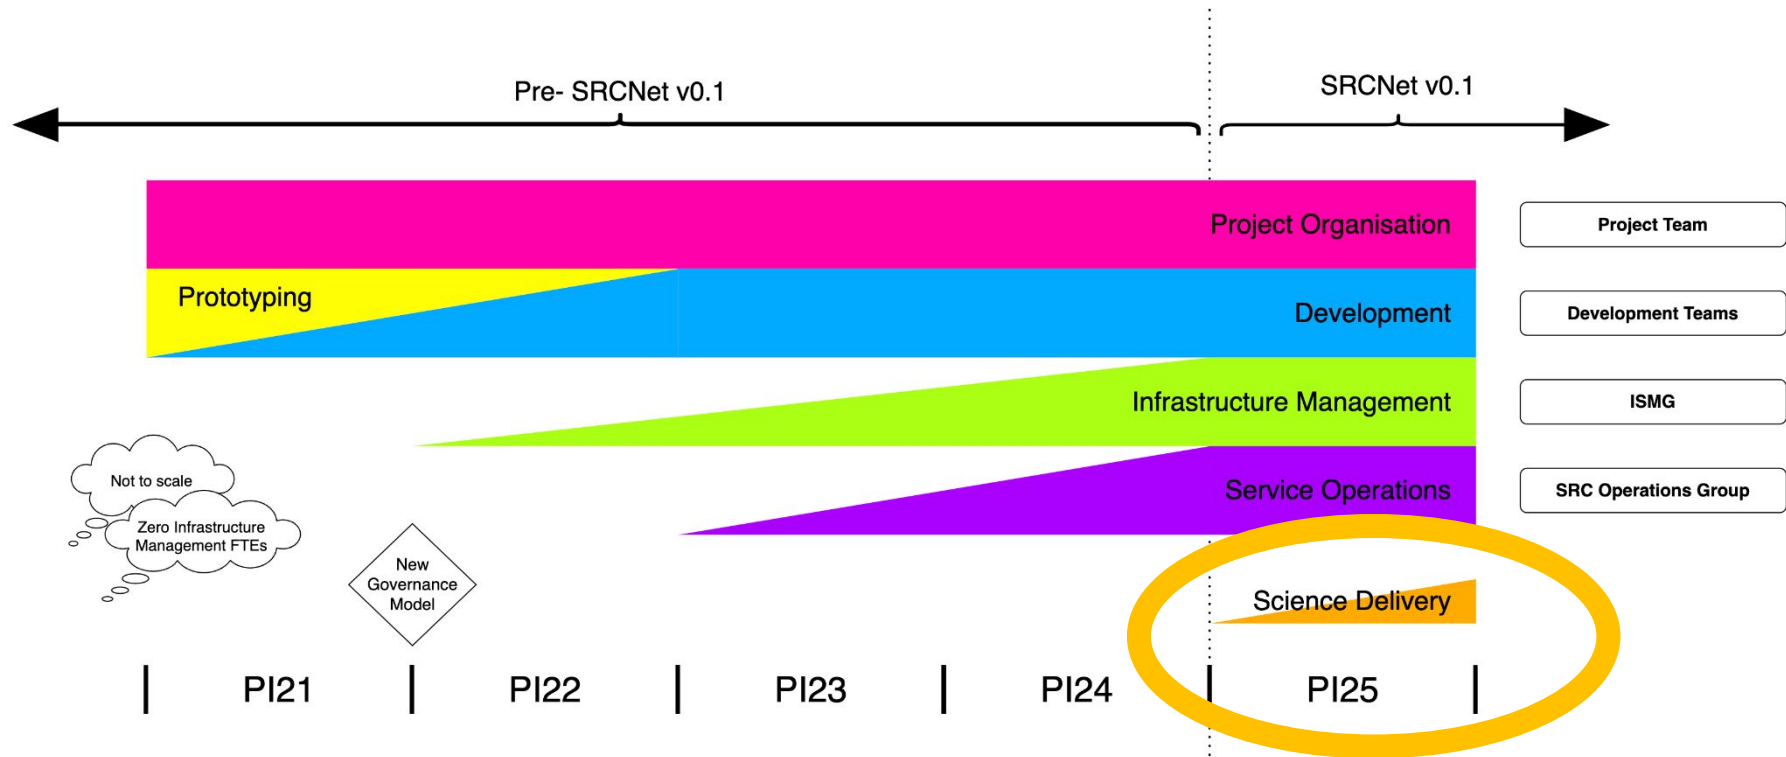

Storage fraction for SRCNet0.1

Compute fraction for SRCNet0.1

Value Stream Development - Science Delivery

Near term FTE resource needs for the SRCNet Project

PI	PI23	PI24	PI25
Start Date	12 June 2024	11 September 2024	11 December 2024
Value Stream	FTEs		
Organisation	6	6	6
Development	34	34	37
Service Operations	0	2	4
Science Delivery	0	0	13
Infrastructure Management	0	0	0
TOTAL	40	42	60

Stable resourcing for PI23 and PI24

PI25: Jump in the level of effort needed if we are to meet plans in the SRCNet Top Level Roadmap 40 to 60 FTE

current PI numbers

PI24 planning 2-6 September!

Current scientific work in SRCNet

We are building a suite of example workflows to support testing of our sites and to develop benchmarking tools, including simulation software to make realistic data sets that could enable end-to-end SRCNet tests

These help demonstrate relevant analyses to our developer community and are now runnable as part of a testing suite with dashboard

Soon (by December) we will seek to strengthen our science work with additional FTEs and specific roles to help community engagement and translation of use cases into technical requirements

End

*We recognise and acknowledge the
Indigenous peoples and cultures that have
traditionally lived on the lands on which
our facilities are located.*
